SUMMARY

Construction Engineer with 3+ years of experience supporting construction execution, field engineering, project coordination, scheduling, quantity tracking, quality control, and technical documentation across infrastructure and building projects. Experienced in reviewing construction drawings, specifications, RFIs, submittals, BOQs, method statements, design revisions, and field conditions. Skilled in contractor coordination, subcontractor management, material coordination, progress tracking, QA/QC inspections, change management, and construction reporting. Proficient in Primavera P6, Procore, AutoCAD, Bluebeam, Microsoft Excel, RS Means, and HeavyBid. Strong foundation in civil construction, structural construction, project controls, construction planning, and field operations.

TECHNICAL SKILLS

Construction Engineering:	Construction Planning, Construction Execution, Field Engineering, Site Coordination, Civil Construction, Structural Construction, Building Construction, Infrastructure Construction, Construction Sequencing, Work Planning
Project Management:	Project Coordination, Contractor Coordination, Subcontractor Coordination, Consultant Coordination, Vendor Coordination, Resource Coordination, Stakeholder Coordination, Procurement Coordination, Construction Management
Project Controls:	Primavera P6, Schedule Management, Progress Tracking, Quantity Tracking, Cost Tracking, Change Management, Material Tracking, Critical Path Analysis, Progress Reporting, Schedule Updates
Construction Documentation:	Construction Drawings, Specifications, RFIs, Submittals, BOQs, Method Statements, Design Revisions, Technical Reports, Daily Reports, Meeting Minutes, Project Records
Quantity and Estimating:	Quantity Takeoffs, Quantity Verification, BOQ Review, Measurement Sheets, Progress Billing, Cost Estimation, Material Quantities, RS Means, HeavyBid
Quality and Safety:	QA/QC, Quality Inspections, Inspection Reports, Defect Identification, Corrective Actions, Specification Compliance, Drawing Compliance, Site Safety, Construction Inspections
Engineering Analysis:	Drawing Review, Technical Analysis, Site Measurements, Material Evaluation, Data Interpretation, Problem Solving, Root Cause Analysis
Software:	Procore, Primavera P6, AutoCAD, Bluebeam, Microsoft Excel, Microsoft Project, RS Means, HeavyBid

EXPERIENCE

Construction Engineer Hill International, USA	Jan 2026 – Present
- Coordinate construction activities across multiple disciplines by reviewing drawings, specifications, RFIs, submittals, schedules, and field conditions to support project execution and compliance with approved requirements. - Monitor contractor progress, installed quantities, material deliveries, and schedule activities, identifying potential delays and providing project teams with timely updates on construction milestones. - Review contractor submittals, RFIs, change requests, and design revisions, coordinating technical clarifications with engineers, consultants, contractors, and field teams to resolve construction issues. - Inspect field activities against approved drawings, specifications, safety requirements, and quality standards, documenting deficiencies and following corrective actions through completion and project closeout activities. - Prepare daily reports, progress updates, meeting records, inspection documentation, and project correspondence, maintaining accurate construction records for project management and stakeholder review.	

Construction Engineer Millennia Ventures and Projects Pvt. Ltd., India	Jul 2023 – Jul 2025
- Executed construction engineering activities by reviewing drawings, specifications, method statements, and field conditions while coordinating daily work with contractors, engineers, and field supervision teams. - Managed construction schedules, work sequences, material requirements, and site activities across multiple work fronts, supporting planned milestones and maintaining continuity of construction operations. - Verified quantities and completed work against drawings, BOQs, and site measurements, supporting progress billing, material reconciliation, subcontractor coordination, and accurate project documentation. - Resolved RFIs, technical clarifications, drawing revisions, and site issues by coordinating with consultants, contractors, vendors, and project engineers to minimize disruptions to construction activities. - Conducted QA/QC inspections for civil and structural works, identifying workmanship deficiencies, documenting observations, and coordinating corrective actions to maintain compliance with project specifications. - Maintained daily progress reports, inspection records, quantity measurements, material documentation, and site correspondence to support project tracking, stakeholder communication, and construction management reviews.	

Research Intern Visvesvaraya National Institute of Technology, India	May 2022 – Jul 2022
- Conducted nondestructive evaluation of sandstone using XRF, Schmidt Hammer, and UPV, analyzing material properties and strength characteristics to support structural material assessment. - Interpreted material characterization data and test results to evaluate sandstone performance, investigate potential component failure factors, and prepare technical documentation summarizing engineering findings.	

PROJECTS

Productivity Simulation of Rubble Mound Breakwater
MicroCYCLONE EZStrobe Construction Planning Productivity Analysis
- Modeled rubble mound breakwater construction workflows using MicroCYCLONE and EZStrobe, evaluating activity sequencing, equipment utilization, labor allocation, and productivity across simulated construction operations. - Compared alternative construction scenarios to identify workflow constraints and improve resource allocation, activity sequencing, equipment utilization, and construction productivity during simulated project execution.

Strength and Durability of Lightweight Concrete Mixes
Concrete Technology Materials Testing Strength Analysis Durability
- Evaluated 10+ lightweight concrete material combinations using strength and durability performance measures, comparing mix characteristics to identify suitable component and process selection strategies. - Analyzed material test results and performance characteristics to assess concrete strength, durability, and wear behavior, supporting selection of suitable lightweight concrete mixes for construction applications.

EDUCATION

Master of Science in Civil Engineering - Concentrations in Construction Engineering with Leadership, Entrepreneurship and Management
Purdue University, West Lafayette, IN

ACADEMIC HONORS & LEADERSHIP
- Dr. B. R. Ambedkar International Overseas Scholarship Government of Karnataka - Office of Public Relations Chair Civil Engineers Graduate Students Advisory Council, Purdue University - Creative Team Head American Society of Civil Engineers, NITK Student Chapter - Content Coordinator American Society of Civil Engineers, NITK Student Chapter
